

Effect Pack 8

for Casablanca Avio, Prestige & Kron

- **Black Border** This effect uses black to cover margin areas in otherwise non-visible image areas so that no distortions occur.
- **Blurred Spot** This effect lets you create a fuzzy, unsharp, circular area to obscure a person's face, or a logo, or any other area you would like blurred.
- **Cine-converter** With this effect, it is possible to convert scenes in 4:3 format to 16:9 format, and vice versa. This makes it possible to use scenes in both formats in a project.
- **Circle Wipe 2** In contrast to circle fade, the fade center can be picked at will on the screen. This allows you, for example, to position the fade at a particular object in the image.
- **Drunken Man** This effect can be used to simulate the "distorted vision" of a drunk person, a boxer just before knock-out, or other similar situations.
- **Frame Swap** This effect switches from one scene to another periodically. You can set the scene duration.
- **Heatwave** This effect simulates the shimmering and flicker of rising warm air.
- **Rotate 2** This effect makes it possible to rotate an image exactly 1/10 of a degree.
- **Shift Fade** This effect uses a mask and user defined movements to move the scenes as one fades into the next.
- **Statue** This effect lets your single images (e.g. photos) move, so that a pretend video scene is created.
- **Tunnel** An image portion within a circle is left unaffected. The rim of the circle is extended (and possibly distorted) out to the image edges so that it appears as if you are looking into a mirrored tunnel or pipe.
- **Tunnel 2** Similar to the tunnel effect, a transition is made either from the circle rim out or from the image edges in.
- **Zoom Fade** Similar to **Shift Fade**, here the scenes Zoom in or out as one scene fades into the next.

Blurred Spot

Drunken Man
