

Bogart v1.6d/2.3d **Release Notes**

Please review all notes in this list before operating your S2000/S4000/S4000 Pro/S4100. Especially be aware of the key items below in the Known Issues list.

FIXES AND CHANGES FOR BOGART 1.6d/2.3d

Changes between Bogart 2.0c to Bogart 2.2 (For users still on 2.0c going to 2.3d)

- New feature: Import and export of own license codes
- Improved HD -> DV conversion (clipboard)
- Improved HD -> DVD conversion (DVD-Arabesk)
- Channels swapping in analog recordings fixed
- Live preview of DV recording is no longer delayed
- Live audio dubbing ("voice over" function in audio mix) crash fixed
- Ksebara function now also works with longer film titles
- Adapted to properly display Title Effect Pack 1 controls (now compatible with SD and HD)
- Updated to work with Photo Studio 2 version 2.2

Changes between Bogart v2.2 and Bogart v2.3d

Installation

- After an update or installation in DVI mode, the Bogart will stay in DVI mode.
- Add On effects are visible directly after activation

Recording

- During HDV recording, playback of the video remains smooth (DVI mode)
- Analog video recording has been corrected and improved
- Restarting an analog recording after signal loss is now functional
- Importing JVC XDCAM footage in the recording screen using AVCHD has been added
- Importing multiple AVCHD files: all files are imported, not just the first

Editing

- Playing out NTSC HD footage to some cameras fixed
- Title effect positioning problem fixed
- When adding footage via the clipboard, a progress bar displays the number of scenes and current conversion
- Countdown effect positions numbers correctly
- Rendering quality of moving titles improved

Changes between Bogart v2.2 and Bogart v2.3d(continued)

Audio

- Indicator problem (causing the right channel to display the value of the left channel) fixed
- In the envelope curve display, playback is indicated from the current position
- Problem that caused timeline display in audio not showing the original audio tracks under effects has been fixed
- S-2000: Audio inputs activated

Media Manager

- Mouse/Trackball control has been expanded: Slideshow fw, rw, pause, stop, lists, text history.
- Quality of import using the Media Manager archives has been improved
- When exporting a Storyboard in Media Manager, the project name is used
- AVCHD DVDs and Blu-rays created with DVD-Arabesk can now be played back without delays
- Line break (return) in e.g. DVD menus can now be entered using PC keyboard
- Scrolling lists has been partially improved
- Data exchange with Bogart SE has been improved: fixes added to audio, picture dropouts or cut off footage.
- A new YouTube format has been added to export options (HD, 16:9)
- Import and export of interlaced formats now have better image quality.
- MP3 import now also works with title names using special characters
- Some smaller problems with NTSC footage fixed.

General

- Dual-Monitor mode: displays a picture on the video monitor when video is not played or edited
- Sporadic interface problems after booting fixed
- Updated to work with QuadCam 1.3, DVD Arabesk V4.4

KNOWN ISSUES

-During HDV Recordings, the preview display will take a couple of seconds to buffer in order to start displaying.

-The HDV preview will not currently have audio.

-On some monitors, the HDV image in preview and in the scene bin may appear to skew or distort the top portion of the image. This is a display problem only. It will not affect the final product. We hope to have this fixed soon.

-There may be a problem when switching to dual monitor modes on certain VGA monitors. If there is difficulty with the machine when using your VGA monitor, use a single analog or single DVI mode for now. We are investigating this issue.

-A full install in the DVI mode will remain in DVI mode for the Bogart side, but be aware the Media Manager side will switch to a single analog monitor mode.

KNOWN ISSUES (continued)

-Currently a Bogart installation or update using a single or dual VGA monitor mode can default the display to single analog monitor mode. A VGA/DVI Bogart update may result in a single DVI mode.

-The system may appear to respond with what appears to be a delay or a frozen cursor when accessing certain menus after long operations. If this occurs, wait a few seconds. The cursor will become active again.

- Quadcam 1.3 could have random stutters in the preview screen on HD projects.

-Arabesk 4.4 may have stuttered playback on DVD-R's with the AVCHD mode. If this occurs, hit pause and then play the disc again. If you have further trouble, please log the type of footage used the specific model number of the Blu-Ray player and let us know.

-AVCHD material may auto split incorrectly and thumbnail images in the scene bin may show a last frame of the prior split scene on the next clip.

-After a new installation, the Media Manager side will display a list of some new products in the Install Product menu. Relaxvision and Expert Package should auto activate for you. Other than those, the Premium Package would be the only add on program you need to activate. Many of the other programs are simply not available yet or for only the European "Enterprise" DVR systems.

-There is a known problem with direct firewire transfers communicating with other Casablanca models and PC's. For now, you may wish to use the export options in Media Manager, the Back Up Storyboard features, or Disk Transfer to move clips between the S2000/S4000/S4000 Pro/S4100 and other Casablanças or PC's.

-Analog output to some older professional video monitors or DVD recorders (e.g. Sony PVM models) may show a lower brightness signal or a black and white signal when using YC. We recommend switching to a different monitor or TV.

-The front USB jack will not currently respond to USB devices with AVCHD. Please use the rear USB plugs.

-There is no DVD playback or virtual previews currently in Arabesk 4.

-When titling in HDV, on a single DVI monitor, the title preview menu is in a 4:3 display on the 16:9 monitor. It goes back to the normal correct size in a Full Size preview.

-There are a few add on software programs left that are still being modified and are not yet available for use on the S2000/S4000/S4000 Pro/S4100. Others like the Card Drive software program are not needed. For updates to the Add On program status and other information, please visit our website www.macrosystem.us.
