Bogart SE V2

Bogart v1.6e/2.3e
<u>Release Notes</u>

Please review all notes in this list before operating your S2000/S4000/S4000 Pro/S4100. Especially be aware of the key items below in the Known Issues list.

<u>FIXES FOR BOGART 1.6e/2.3e</u>

-Fixed a problem with the WinterX program where its activation could damage or empty the Image pool.

-Field swap during HD->SD conversion is fixed.

-Some changes added for Media Manager import/export functions.

-Firmware update for Pioneer BDR-203 v1.10 has been added.

-Sometimes the video mode for Bogart or MM was changed during an installation. This is now fixed.

- A couple of emergency screen switch options have been added. In most cases, you won't need to use these commands. However, it is now possible to change the Media Manager (or MM) screen mode with a trackball command.   Go to the MM main menu. Now press and hold the right mouse button for 5sec. On the front display, you will see "Display: SCART" and on the monitor would be a small option box to choose your output display. The options in MM are for "Scart" for the analog output or "DVI". If are already in the DVI mode and you want to switch the system to an analog output, click the left trackball button once. It will switch over to the other monitor setup. Be sure to have that other type of monitor connected before you try this.

-The possibility to emergency switch the Bogart screen has been added too. Go to Bogart main menu. At the front display you will see "MacroSystem". Now you can press and hold the right mouse button for 5sec. At the front display you will see "Display: SCART". On the display screen you will see a menu offering you the choice of "Scart", "DVI", and "VGA". If you left click once, the screen mode will switch to the next monitor mode option listed in the list. Be sure to have that type of monitor connected before you try this.

-Some other small changes and bug fixes added.   Please note: the dual setup for VGA monitors has not yet been fixed in this version. We hope to see this patch very soon. For now, we recommend continued use with a single analog or single DVI mode until the update is available.

Other known issues listed on reverse side.

KNOWN ISSUES

-During HDV Recordings, the preview display will take a couple of seconds to buffer in order to start displaying.

-The HDV preview will not currently have audio.

-On some monitors, the HDV image in preview and in the scene bin may appear to skew or distort the top portion of the image. This is a display problem only. It will not affect the final product.

-There may be a problem when switching to dual monitor modes with VGA monitors. If there is difficulty with the machine when using your VGA monitor, use a single analog or single DVI mode for now. We hope to have this fixed soon.

-The system may appear to respond with what appears to be a delay or a frozen cursor when accessing certain menus after long operations. If this occurs, wait a few seconds. The cursor will become active again.

- Quadcam 1.3 could have random stutters in the preview screen on HD projects.

-Arabesk 4.5 may have stuttered playback on DVD-R's with the AVCHD mode. If this occurs, hit pause and then play the disc again. If you have further trouble, please log the type of footage used the specific model number of the Blu-Ray player and let us know.

-AVCHD material may auto split incorrectly. The thumbnail images in the scene bin may show a last frame of the prior split scene on the next clip.

-After a new installation, the Media Manager side will display a list of some new products in the Install Product menu. Relaxvision and Expert Package should auto activate for you. Other than those, the Premium Package would be the only add on program you need to activate. Many of the other programs are simply not available yet or for only the European "Enterprise" DVR systems.

-There is a known problem with direct firewire transfers communicating with other Casablanca models and PC's. For now, you may wish to use the export options in Media Manager, the Back Up Storyboard features, or Disk Transfer to move clips between the S2000/S4000/S4000 Pro/S4100 and other Casablancas or PC's.

-Analog output to some older professional video monitors or DVD recorders (eg. Sony PVM models) may show a lower brightness signal or a black and white signal when using YC. We recommend switching to a different monitor or TV.

-The front USB jack will not currently respond to USB devices with AVCHD. Please use the rear USB plugs.

-There is no DVD playback or virtual previews currently in Arabesk 4.

-When titling in HDV, on a single DVI monitor, the title preview menu is in a 4:3 display on the 16:9 monitor. It goes back to the normal correct size in a Full Size preview.
