

SETTING UP TWO HARD DRIVES ON A KRON PLUS

To format and use two internal hard drives, if installed on a Kron Plus, follow the steps below:

1. With the Kron OFF, insert your operating system card and turn the Kron ON.
2. When asked, select the drive – IDE0 or IDE1 – that you wish to format.
NOTE: *If you have just added a second drive and don't wish to reformat an existing drive, then select "IDE1".*
3. After the first drive is formatted, repeat steps 1-3 and select the other drive for formatting.
4. After both drives are formatted install any optional software you have on **both** drives.

Now that both drives are formatted, the desired drive to use for a particular editing session can be selected from the System Settings screen.

NOTE: The two drives are totally independent and different versions of the operating system and optional software sets can be used on each of the drives.
