

SmartEdit 8.3 Release Notes

(Note: Smart Edit 8.3 requires your Casablanca system to have at least 256 MB of RAM.)

FIXES

- Wrong colors displayed while trimming and playing back scenes on a Claro fixed.
- Enhanced playback on Claro.
- Ksebara works now with DVD-Arabesk 3
- Playing in the Audio-Mix envelope begins near selected position.
- Title Effects with 4 lines of controls will now properly display in single analog mode.
- Moving the playback controls or the Trim menu up or down on the screen no longer shows a gray box where the menu used to be.
- Filters that won't properly work in the Effect Stack now will be blocked out.
- Improvements to recognizing USB thumb drives in the Backup Archives menu.

KNOWN ISSUES

- When working with Countdown, the option for the Shadow Blur in "Style" is not working.
- There is no sound in Audio/Record Edit menu when the input is set for DV.
- During Single VGA monitor mode, there is no video signal visible when using analog input for video recordings.
- Audio Rendering may take longer to render. (This applies to the other SE 8 versions as well.)

IN HDV PROJECTS:

- DVD's created from HDV edited Material exhibits a line of distortion at the bottom of the screen in under scan mode. (This distortion is not seen in HDV tape export)
- Photo Mode in the Record menu does not function in an HDV project

ADDITIONAL NOTES:

- If you haven't done an update or install in a while, we recommend backing up your important work to disc, tape, or external drive prior to doing your update or installation just as a safety.
