

## *HDV Recorder Release Notes*

### *Known Issue:*

Some display resolutions may have unsynchronized audio and video during live viewing, recording, and playback due to an unusual VGA scan frequency.

These resolutions are:

- 1024x768
- 1280 x 768
- 1920 x 1200

To avoid this problem, please use one of the other 5 display resolutions.

This can be changed in the main menu under "Display". This will be corrected in a future software version.

This affects the display *only*; archived material is synchronized properly. You can export to tape in any resolution without any issues.
